

Technical Data Sheet

Ammonium lignohumate

Production Description

Ammonium lignohumate(Ammonium lignohumate) is used as spray fertilizer irrigation fertilizer base fertilizer and so on,with enhanced function to bind with nitrogen and other nutrients.

Main Specification

Name	Ammonium Lignohumate
Product Code	GAC-NHLSHA
Appearance	Black powder
PH	Around 9
Dry matters	95%min
Water-insoluble	1.0%max
Sulfate	15%min
Nitrogen	5%min
Lignosulfonate	65%min
Moisture	15%Min

Uses

Used as fertilizer

- With stronger CEC will largely increase the fertility of soil and water holding capacity
- Its humic acids can stimulate cell division and increase permeability of membrane to increase plants growth through magnified absorption of a group of micro nutrient by strong root system.
- Can create a kind of cozy environment for microbial to grow ,thus promote plants growth.
- Strong chelate capability to chelate the mineral ions into the form of absorbable by plants.
- Largely increase the yield and fruits quality.

Package

1.25kg woven bags with liner inside;

2.According to customer' s requirement.
